

STREAMLINE YOUR BUSINESS WITH SAP ERP SOLUTIONS

WE ARE EXPERIENCED SAP ERP IMPLEMENTORS

Since 2003, EPAM's SAP Enterprise Resource Planning (ERP) group has been providing world-leading companies with superior assistance in designing, implementing, testing, and supporting SAP-enabled solutions. EPAM has since scaled its SAP ERP practice to employ over 250 engineers supported by 130 functional consultants serving more than 40 satisfied clients across the globe. We are an established leader, helping the most successful companies realize the value of their SAP investments with significant gains in process efficiency, cost management, and data-driven decision-making.

START PLANNING MORE EFFECTIVELY

When we implement and upgrade SAP ERP solutions, we set the stage for business innovations that simply would not have been possible before the engagement. We design required enterprise- and industry-specific system customizations, including Fiori-based UI and cloud-enabled solutions, to empower our clients to access their analytical and transactional data whenever they need it. To that end, we protect each client's SAP ERP investment through the following processes:

- Migrating SAP ECC to S/4HANA and SAP Cloud
- Optimizing custom code within new technology platforms
- Overseeing complex integration and orchestration between different systems
- Extending SAP applications with SAPUI5/Fiori
- Implementing complex BI and analytics

Our experienced consultants and technologists know what it takes to execute full-scale, end-to-end SAP ERP implementation, and we understand that the same solution won't work for every client. That's why we offer expertise on the full suite of SAP technologies to streamline business planning and decision-making for our clients.
